IDLE

## Lecture V: Using the “naked” interpreter

# The pieces of software

- Python 3.9+, with pip and the IDLE editor (on MS Windows they are bundled together):  
<https://www.python.org/downloads/>
- Git 2.30+ <https://git-scm.com/downloads>
- (optional, Win and Mac only) Github desktop  
<https://desktop.github.com/>

Homework assignments will be available via Github Classroom (you will need a Github account).

When you **push** (hand in) your solution, a suite of tests is run.

# Software Configuration Management

PyQB

Monga

Software

git

IDLE

Software Configuration Management like `git` are tools designed to track all the **revisions** of some set of software **artifacts** (files).

The system configuration itself evolves in different **versions**. One can have multiple **branches** of evolution.

**A motivating talk on why you should use tools like these in your scientific work.**

# Git

git is a powerful tool to manage all this complexity in a very efficient (and distributed) way. It is not an easy tool, however. A good tutorial is [here](#). But for this course we use a very simplistic workflow:

- 1 Clone (copy) on your machine a repository `git clone ...`;
- 2 Work on the artifacts
- 3 Add the modified artifacts to the changeset you want to "publish" `git add ...`
- 4 Commit the changeset `git commit -m"message"` providing a comment about what have you done
- 5 Push the changeset on Github `git push`
- 6 (If someone else is working on the same artifacts you can sync with `git pull`)

All these steps are very easy (almost hidden, especially authentication) if you use Github desktop.

git

IDLE

**Programs are data!** File extension is conventionally `.py`

- To edit Python programs you need a **text editor**: something like Notepad, not Word (a word processor)
- IDLE is the “standard” one provided by the Python distribution itself: it is easy to use and it provides an easy way for executing programs without getting to the command line
- Other good choices: VS Code Atom Notepad++ or any other universal text editor like EMACS or vi
